

Sort the following as physical or behavioral adaptations.  
(answers are on the back)

Pointed teeth to eat meat.	Hibernating for the winter.	Migrating to find food.	Sharp claws to take down prey.
Taking care of young.	Feathers to fly and keep warm.	Playing dead to trick predators.	Thumbs to hold on to objects.
Thick layer of fat to keep warm.	Sharp beak to crack open tree nuts.	Releasing a foul odor to deter predators.	Giving a warning call when a predator is near.

\* These are examples of the types of questions you will get on the quiz. The quiz will use different examples, so make sure you understand the difference between physical and behavioral adaptations.
